Ray Brook, New York, 12977

General funding for the Adirondack Lakes Survey Corporation and the Adirondack Long-Term Monitoring Program comes from the New York State Energy Research and Development Authority, the U.S. Environmental Protection Agency's Office of Research and Development, and the New York State Department of Environmental Conservation. Funding for the preparation and distribution of this report was provided through a grant from the U.S. Environmental Protection Agency's Clean Air Markets Division and supported, in part, by the New York State Department of Environmental Conservation. Funding for the publication of this report was provided by the New York State Energy Research and Development Authority. This report has not been subject to peer or administrative review by any of the support agencies and does not necessarily reflect their views. No official endorsement by any of them should be inferred.

ADIRONDACK LAKES SURVEY DATA
ON THE WEB x

1 INTRODUCTION & SYNOPSIS 1

AUDIENCE & DESIGN 1

Boundaries 3

Outlines & References 4

The Primer 4

A Preprimer 4

SYNOPSIS 5

NOTES 14

ACRONYMS & SYMBOLS 14

2 PRIMER AND GLOSSARY 17

3 ADIRONDACK RESEARCH BEGINS 41

The Rediscovery of Acid Rain, 1950–1979 41

New Research Programs, 1978–1989 42

THE LAKE-WATERSHED STUDIES 44

The ILWAS Model: Flowpaths Matter 45

The RILWAS Lake Classification: Drainage &
Seepage Lakes 48

The Chemical Signatures of Different Lake
Types 49

The Chemical Signature of Atmospheric Acids 51

Which lakes have high inorganic aluminum con-
centrations? 51

A Watershed-Scale Example: The North Branch of
the Moose River 52

Soil Depth and Acid-Neutralizing Capacity 54

Seasonal Acidity Peaks 55

Which properties of watersheds predict lake
chemistry? 56

RECONSTRUCTING LAKE HISTORIES 56

Direct Historical Comparisons 57

Paleolimnological Techniques 58

The Early Chemical History of Three High Peaks
Ponds 58

The Recent Chemical History of Big Moose
Lake 59

The Chemical Histories of Panther, Sagamore,
and Woods Lakes 60

SUMMARY 61

NOTES 62

4 THE BIG SYNOPTIC STUDIES, 1984–1991 65

THE EASTERN LAKE SURVEY, 1984–1986 65

The Second Phase of the Eastern Lake Survey,
1986 68

THE ADIRONDACK LAKES SURVEY, 1984–1987 69

The Design of the Survey 69

General Chemical Results 70

The Geography of Acidification 71

Lake Classification 71

The Sources of Lake Acidity 73

Fish and Acidity 75

Fish in Different Types of Lakes 77

Historical Changes in Fish Diversity 77

Why do some lakes lack fish? 79

How many lakes are acid? 79

THE PIRLA PROJECT 81

PIRLA-I 81

The First North American Synthesis, 1990 83

PIRLA-II & the Regional Picture 84

Further Lessons from Paleolimnology 86

SUMMARY: HOW MANY ADIRONDACK LAKES ARE
ACID AND HOW MUCH HAVE THEY ACIDIFIED 88

5 THE CYCLING OF SULFUR AND NITROGEN 91

Watersheds as Transformers 92

Watersheds Have Histories 93

SULFUR ADSORPTION AND SULFUR CYCLING 94

Sulfur Cycling in a Hardwood Forest	95	6 THE CYCLING & LOSS OF CALCIUM	129
Sulfur Retention & Loss: The Direct Delayed Response Project, 1984–1989	96	CALCIUM CYCLING & CALCIUM DEPLETION	129
Sulfur Budgets at Arbutus Lake & Hubbard Brook	97	About Calcium	129
NITROGEN CYCLING AND NITROGEN BALANCES	98	Calcium Pools in a Forest	130
Nitrogen Neglected	98	Calcium Cycling	131
Nitrogen Acidification Appears	99	Can acid deposition deplete calcium pools?	133
Nitrogen in Forests	100	Calcium & Streams	136
Nitrogen-Cycle Acidification	101	How much calcium has been lost from forest soils?	139
Nitrogen Cycling on Whiteface Mountain	101	Do forest disturbances remove calcium or acidify surface waters?	140
The Nitrogen Balance of Arbutus Watershed	102	Correlating Disturbance & Acidification	142
Nitrogen Cycling in Hardwood Forest Floors	103	MANIPULATING CALCIUM	144
Estimates of Nitrogen-Cycle Acidification	104	Liming a Lake	145
The Nitrogen Cycle Generalized	104	Liming a Watershed	148
NITROGEN PEAKS IN LAKES, MELTWATER, & STREAMS	105	SUMMARY	150
Acid Episodes in Adirondack lakes	105	NOTES	151
Snowmelt Chemistry at Twitchell Lake	106	7 WETLANDS, CARBON, & MERCURY	153
New and Old Water in the ALTM Watersheds	108	Case Study 1: A Beaver Pond as a Chemical Transformer	154
Acid Episodes on Four Adirondack Streams	109	ANC Generation in the Pancake-Hall Pond	155
The Nitrate Balance of the ERP Streams	111	Case Study 2: A Swamp in Ontario Releases Pulses of Acid	156
Which ions control acid episodes?	111	Case Study 3: Liming a Beaver Pond Stimulates Decay and Generates ANC	158
THE NITROGEN SATURATION OF WATERSHEDS	112	About DOC	160
Diagnosing the Stages of Nitrogen Saturation	113	The Sources of DOC	161
What is the evidence for nitrogen saturation?	116	THE MERCURY PROBLEM & THE MERCURY CYCLE	164
The Extent of Nitrogen Saturation	116	About Mercury	164
Do forests progress through the nitrogen saturation stages?	117	The First Adirondack Mercury Studies	165
A Synoptic Study of Nitrogen Saturation	119	Mercury & Fish in the 1980s and 1990s	166
Summer Nitrate Levels in the Adirondacks	120	The Mercury Cycle	167
SUMMARY: NITROGEN AND SULFUR CYCLES	121	Recent Mercury Research	169
NOTES	126	SUMMARY	173

NOTES	174	10 CONCLUSIONS	215
8 FISH, ACIDS, & AQUATIC ECOLOGY	177	1 When did acid deposition begin, and when did it reach its peak?	215
The Biology of Acidification	177	2 How does acid deposition in the Adirondacks compare with acid deposition elsewhere in the country?	216
Ecosystem-Level Effects of Acidification	179	3 Have Adirondack surface waters been acidified by acid deposition?	216
Do fish die in acid episodes?	180	4 How much have Adirondack lakes acidified?	217
Historical Losses of Fish Populations	182	5 Has the acidification of Adirondack waters had biological effects?	217
Ecological Monitoring in the 1990s	184	6 Has acid deposition had cumulative effects on watersheds?	218
Indicators of Ecological Stress	186	7 How much has acid deposition been reduced?	219
Regional Fish Diversity	186	8 Have the reductions been reflected in changes in surface water chemistry?	220
SUMMARY	189	9 Are further reductions necessary to achieve recovery?	221
NOTES	189	10 What were the most important scientific results of the 1990s?	223
9 MONITORING & TRENDS	191	11 What are the main scientific tasks of the next decade?	223
Monitoring Emissions, Air Chemistry, and Deposition	192	12 How important are the current Adirondack long-term monitoring programs?	224
Monitoring Surface Waters	194	13 Are they adequate to monitor acidification and recovery?	225
TRENDS IN EMISSIONS AND DEPOSITION	195	14 What might an expanded monitoring system include?	225
Trends in Acid Emissions	195	BIBLIOGRAPHY	226
Trends in Wet Deposition	196	INDEX	237
TRENDS IN ADIRONDACK LAKES & STREAMS	197		
What should recovery look like?	197		
Trends at Big Moose Lake	199		
Trends in the ALTM Lakes	199		
Recovery Times	203		
Trends in Adirondack Streams, 1991-2001	203		
REGIONAL TRENDS	203		
Acidification vs. Dilution	205		
Stoddard 1999: ANCs Begin to Recover in Europe	206		
Stoddard 2003: ANCs Improve in the United States	207		
But Recovery Is Delayed	208		
WATERSHED MONITORING AT ARBUTUS LAKE	210		
Seasonal Uptake & Release	211		
SUMMARY	212
